

The Burden of Diabetes in Vermont

Diabetes is an epidemic in the United States. According to the Centers for Disease Control and Prevention (CDC), over 38 million Americans have diabetes and face its devastating consequences. What's true nationwide is also true in Vermont.

Vermont's diabetes epidemic:

- Approximately 44,600 adults in Vermont, or 7.00% of the adult population, have diagnosed diabetes.
- Every year, an estimated 3,000 adults in Vermont are diagnosed with diabetes.

The serious complications of diabetes include heart disease, stroke, amputation, end-stage kidney disease, blindness—and death.

Diabetes Is Expensive

Americans with diabetes have medical expenses approximately 2.6 times higher than those without. The total estimated cost of diagnosed diabetes in the U.S. was \$412.9 billion in 2022, including \$306.6 billion in direct medical costs and \$106.3 billion in reduced productivity attributable to diabetes.

In Vermont, diagnosed diabetes costs an estimated \$3.8 billion each year. In 2022:

- Total direct medical expenses for diagnosed diabetes in Vermont were estimated to be \$480 million
- In addition, there were \$3.3 billion in estimated indirect costs from lost productivity due to diabetes

In addition to the work of the American Diabetes Association® to improve lives, prevent diabetes, and find a cure:

In 2024, the National Institute of Diabetes and Digestive and Kidney Diseases at the National Institutes of Health invested \$437,139 in diabetes-related research projects in Vermont.

The Division of Diabetes Translation at the CDC provided \$906,720 in diabetes prevention and educational grants in Vermont in 2023.
